

CORONAVIRUS

Did you know?

The coronavirus spreads primarily through respiratory droplets generated when a person coughs or sneezes, or through droplets of saliva or discharge from the nose.

Human coronaviruses can persist on metal, glass or plastic surfaces for up to **9 days**.

It has been proven that surface disinfection using **Isopropyl Alcohol (IPA)** can reduce Coronavirus infectivity within one minute exposure time.

It is essential to **decontaminate high-risk areas** and surfaces **several times a day**, helping to reduce any spread of infection.

Azo 70% IPA Wipes and Spray are proven to be effective against SARS-CoV-2, the virus that causes COVID-19 with a **kill time of 15 seconds**.

ORDER NOW!

Due to the exceptional high demand, we have increased our production to ensure availability.

Azo wipes are manufactured in the UK, resulting in an uninterrupted supply chain.
